

OVERWHELMED WITH GETTING LEADS ON LINKEDIN?

Susan MacConnell is a LinkedIn lead generation strategist & President of Diversified Sales Solutions. She is the go-to expert for established professionals, who are overwhelmed with generating leads on LinkedIn. They're looking for an efficient and customized method to acquire more premium clients and referral partners without being spammy, gross or sales-y. Susan's sales career spans over 20 years and she was an early adopter of LinkedIn, when it was easy to find prospects. She has continued to grow her network and client base successfully over the years. Over a year ago, she started getting massive amounts of inappropriate connection requests, spam messages and less qualified prospects. Susan created **The Client Connector Method** to effectively turn connections into clients from LinkedIn that works in our current environment. She now helps her clients grow their business on LinkedIn by organically adding on average 20-30 new leads per month in an hour or less per day.

LinkedIn Client Connector Method
